International Performance  
Assessment Centre  
*for the Geologic Storage of Carbon Dioxide*

April 12, 2010

To whom it may concern:

The Office of Energy and Environment, as well as several other institutes, at the University of Regina was recently honoured to host Mr. Mark Terry of Polar Cap Productions at the University. Mr. Terry introduced his documentary, *The Antarctica Challenge: A Global Warning*, to a substantial audience. The documentary was well received by the audience.

The University of Regina is one of the leading universities in Canada in the area of Climate Change and the response to climate change. As a result, the audience was generally well informed on the issue. The warm response by the audience was testament to the quality of the documentary.

The documentary was well prepared and very informative about the challenge facing the Antarctic and its fauna and flora as changes occur. Indeed, as the documentary points out, changes in Antarctica will affect us all if they continue unabated. It was clear on viewing the video why it was awarded Best Documentary Feature at this year's Canada International Film Festival in Vancouver. It was also quite evident why the United Nations Framework Convention on Climate Change invited Mr. Terry to show the documentary at the Conference of the Parties meeting in Copenhagen in December.

The presence of Mr. Terry in Regina to introduce the film and to answer questions following the viewing was indeed a highlight. The background information and the candid response to many informed questions added significantly to the experience of the audience. I received many complimentary comments following the event from members of the audience. It was indeed a pleasure to have Mr. Terry in Regina to play this role. He also was kind enough to present to Geology students here at the University.

I can without any doubt recommend Mr. Terry and his extraordinary documentary to any organisation that may be interested in following our example and hosting Mr. Terry to complement the screening of his documentary. Indeed, I will be forwarding this suggestion to colleagues in Europe. I wish Mr. Terry all the best and much success with this documentary and look forward to his future endeavours. I truly hope that many people view this documentary for both its content and its message.

Sincerely,

A handwritten signature in black ink, appearing to read 'M. Wilson'.

Malcolm Wilson, Ph.D.
